Final Project

For your final project, you can either develop a visualization notebook or write a paper. Notebooks can be developed individually or in groups of two; papers must be written individually.

Visualization notebook: Choose a dataset, formulate an interesting hypothesis, and use visualization to examine your hypothesis. Your project should comprise an IPython notebook that develops the visualization in increments using both code and text cells, similar in format to the notebooks presented in this class. Include concluding text cells to summarize your findings.

Paper: Write a paper that investigates an interesting problem or method in data visualization. The paper should provide background (including references to relevant literature) and motivation, explain the problem or method, and discuss future work. It should run about 8–12 double-spaced pages not counting figures.

Two requirements for all projects

1. Project proposal: Please submit a project proposal by the proposal due date. Your proposal, which should run no more than a page, should include:

- a brief description of your proposed project;
- if you're working with another student on a notebook, the other student's name;
- the project's objective; and
- relevant references if any.

I will review your proposal and respond with suggestions. I'll also indicate whether I believe your project is too ambitious, not ambitious enough, or just right.

2. Project submission: Submit your project by the project due date. Your submission will be either a Word doc or an IPython notebook. If the latter, also submit datasets, or links to datasets, your notebook requires (you can submit a zip archive if your project spans multiple files).

Optional presentation: We'll hold project presentations the last week of the term. If you wish to present your final project, either present the key points of your paper (using a PowerPoint slide set) or step through the main cells of your notebook. Presentations should run about 10 minutes, with some flexibility depending on the number of presentations. We'll schedule two sessions during the last week of the term to ensure everyone who chooses to present will have an opportunity. Once we've scheduled these two sessions, please contact me in advance if you wish to present in one of the sessions.
